DENTAL TREATMENT

Dental Hospital:

We care for healthy smiles

DENTAL HOSPITAL
SUKHUMVIT 77 BANGKOK

Quality and Dental Service Excellence

Dental Hospital is a private modern hospital in Bangkok. The hospital has been open since 1990 at 88/88 Sukhumvit 49, Sukhumvit Road, Bangkok and relocating to a larger site in the T77 community at 7 Soi On Nut 1/1, Sukhumvit 77, Sukhumvit Road, Bangkok on May 17, 2018.

T77 community is the mega development project located on an over-50-rai plot of land surrounded by a green environment and conveniently linked to other parts of the city with either the main Sukhumvit Road, the BTS Skytrain and nearby Expressway. Access to and from is fast and easy, with benefits from the neighbouring Habito Mall facility and Shuttle Bus services, a natural canal that runs along Sukhumvit 77 (On Nut Road), making it a popular new location for everyone.

The hospital provides complete dental services by dental specialists in each field of dentistry with the effective infection control procedures in relaxed and peaceful environment.

Before your Treatment

Oral Diagnosis and Treatment Planning

During the first visit, patients will receive a dental check up, panoramic x-ray and treatment plan at the Oral Diagnosis Department and will then be referred to the required dental specialists to discuss a definite treatment plan that is suitable for them.

We take the time to understand your specific requirements and create an individualised treatment plan that meets your needs. We offer a wide variety of dental services and treatment options that address the concerns and needs of you and your family.

From general preventative care to a full range of comprehensive dental services and implant dentistry, we are confident that you will receive high quality dental treatments and unprecedented comfort in our welcoming hospital.

Dental Services for Patients

Dental Hospital is a modern hospital that performs dental treatment in accordance with international standards. We provide a wide range of dental services, applying the most innovative methods of treatment, using only the best materials and highly qualified dental specialists in each field of dentistry. The new equipment can utilize to provide the high standard dental care that protects the oral health and general health.

A standard of excellence in personalized dental care enables us to provide the quality dental services our patients deserve. We provide comprehensive treatment planning and use restorative and cosmetic dentistry to achieve your optimal dental health.

Infection control in the hospital is very important to us. To protect our patients and ourselves, we strictly maintain sterilization and cross contamination processes using standards recommended and universal precautions.

Dental care was never meant to be stressful. The relaxed and peaceful environment is more likely to make patients feel relaxed and comfortable.

Disinfection and Sterilisation

Disinfection and sterilisation are essential for preventing transmission of infectious pathogens to patients and staff. Dental professionals are exposed to a wide variety of microorganisms in the blood and saliva of patients. The use of effective infection control procedures with universal precautions and disposable products in the hospital will prevent cross contamination that could extend to patients, dentists, dental office staff and dental technicians.

The Central Sterilisation or Central Supply is located within the hospital in which dental or surgical supplies and equipment, are cleaned, prepared, processed, stored, and issued for patient care, in a completely sterile environment.

Pathogenic contamination in the treatment room is prevented through conscientious infection control. Three concepts combine to form a successful hygienic safety plan for treatment rooms, cleaning, disinfecting and sterilising.

Dental Laboratory Works

Behind every great dentist stands a great team of dental technicians and ceramists. Our in-house dental laboratory is a great advantage for the patients of Dental Hospital.

Instead of having to send out dental laboratory work on crowns, veneers, and dentures to offsite labs, our technicians are able to craft everything on site, and make small custom adjustments immediately, even at the last minute to make sure that you have the highest standard dental work and best possible smile.

We are constantly kept up to date on high quality materials and new technologies in dental prosthetics and make them available to our patients. And because we have people on staff who work directly with crowns and other dental components, our prosthodontists and other dental specialists are able to call for the high quality laboratory work, modifications and adjustments that they are not delaying our patients in getting them.

We take pride in providing the highest quality dental laboratory works for dental practitioners and patients.

All Dentistry Under One Roof

From simple essentials like professional check-ups and cleanings to specialty procedures like dental implants, we understand how inconvenient and time-consuming it can be when you have to constantly travel to different specialists. At Dental Hospital, we take pride in being a true “one stop service” that will help you stay in one location throughout the course of dental treatments.

We offer a complete range of dental treatments, performed by skilled and experienced dental specialists in each field of dentistry with modern dental technology and equipment, digital x-ray and CT Scan, disinfection and sterilisation, Invisalign and iTero scan, operating and admitting rooms, central sterilisation and supply, dental laboratory and technicians.
